ARPIT KUMAR

CYBERSECURITY | SOFTWARE DEVELOPMENT | SOC & VAPT LEARNING

Jaipur, Rajasthan, India | +91 9142170211 | arpitkumar0211@gmail.com

LinkedIn | Portfolio | GitHub | TryHackMe | Hack The Box | GeeksforGeeks

PROFESSIONAL PROFILE

B.Tech Information Technology student at Arya College of Engineering and IT with an SGPA of 9.6, combining software development experience with growing practical foundations in cybersecurity. Built a Python-based SSH authentication-log analyzer with threshold alerts and CSV reporting, and practices defensive analysis and security testing concepts through authorized lab environments. Interested in SOC/Blue Team operations, vulnerability assessment and penetration testing (VAPT), web security, and security automation.

CAREER INTERESTS

Target roles: Cybersecurity Intern, SOC Analyst Intern, Blue Team Intern, VAPT Intern, Junior Security Analyst

Focus areas: Log analysis, authentication-event review, basic alert triage, defensive investigation, reconnaissance and enumeration in authorized labs, web security fundamentals, technical documentation

EDUCATION

B.Tech - Information Technology: Arya College of Engineering and IT, Jaipur | 2024-2028 | SGPA: 9.6

Class XII - CBSE: ABR Foundation School | 2023

Class X - CBSE: Dedicated Public School | 2021

TECHNICAL COMPETENCIES

Cybersecurity and SOC: SSH authentication-log review, security monitoring concepts, event triage fundamentals, incident-response basics, investigation documentation, security lab practice

VAPT and web security: Reconnaissance and enumeration concepts, CTF-style exercises; familiarity with Nmap, Wireshark, Burp Suite, and Metasploit through learning/lab practice

Programming and scripting: Python, C, C++, Java, JavaScript, TypeScript, Dart, SQL

Web and backend: HTML, CSS, Tailwind CSS, React, Next.js, Node.js, Express, FastAPI, REST APIs, WebSockets

Mobile and data: Flutter, Firebase, MySQL, PostgreSQL, MongoDB, Supabase, Neon, pgvector, SQLite

Tools and deployment: Git/GitHub, VS Code, Docker, Vercel, Render, Railway, Google Cloud tools and development workflows

CYBERSECURITY PRACTICE

- Hands-on learning through TryHackMe and Hack The Box room-based labs and CTF-style exercises.
- Current learning themes include Linux and networking fundamentals, SSH/authentication logs, reconnaissance, enumeration, web-security concepts, and defensive investigation.
- Uses controlled lab exercises and synthetic log samples to practice repeatable security-analysis workflows.

TRAINING AND CERTIFICATES

Data Science with AI - Internshala Trainings: Eight-week training (July 2026): data analysis, AI-powered Excel, Power BI/Tableau, predictive analytics, machine learning, and capstone project.

GRRAS Solutions - Certificate of Training: Linux, web development, GitHub, networking, and prompt engineering; certificate awarded with distinction (2 June 2026).

SELECTED PROJECT HIGHLIGHT

SOC Log Analyzer - SSH Authentication Monitoring | *Python, CLI, CSV* **[Built]**

- Parsed Linux-style SSH authentication logs and summarized successful and failed login activity by source IP and username.
- Added threshold alerts for repeated failures and CSV reporting; validated workflows with synthetic logs and documented basic SOC triage.

PROJECT PORTFOLIO - SECURITY, AI AND REAL-TIME SYSTEMS

Phishing Email Analyzer | *Python, email/header analysis* **[In progress]**

- Developing a local/offline workflow to inspect saved email messages, review sender and header details, and extract URLs and IP addresses for manual inspection.
- Planned output includes suspicious-indicator flags and a readable analysis report; implementation is in progress.

GreenFlow - Smart Traffic Management System | *FastAPI, WebSockets, Supabase, Next.js, Flutter* **[Prototype]**

- Developed prototype components for traffic monitoring, real-time dashboard updates, prediction workflows, and emergency green-corridor activation.
- Worked on FastAPI endpoints, WebSocket event flow, and a Supabase-ready data layer; explored a web dashboard and Flutter client.

EduAI Nexus X - AI Learning Platform | *Next.js, React, TypeScript, Tailwind CSS, FastAPI* **[Development]**

- Structured a frontend/backend monorepo for an AI-assisted learning platform with a responsive web experience and separately deployable services.
- Worked with the application architecture and deployment path for a Next.js frontend and FastAPI backend.

StudyForge - AI Study Notes Generator | *Next.js, TypeScript, FastAPI, Supabase, PostgreSQL/pgvector* **[Design/development]**

- Designed an AI-assisted study platform with a responsive interface and API-oriented backend architecture.
- Planned a PostgreSQL/pgvector data layer for organizing learning content and enabling future retrieval features.

Sports Media Protection | *Python, perceptual hashing* **[Concept]**

- Concept for finding visually similar or reused match-day media to support review of potentially duplicated content.
- Proposed future capabilities include authenticated scans and audit history; these are planned rather than completed features.

ADDITIONAL SOFTWARE, MOBILE AND HARDWARE PROJECTS

CarePulse - Hospital Digital Attendance System | *Flutter, Dart, Riverpod, Firebase, NFC, geolocation* **[Product planning]**

- Planned a hospital attendance application with authentication and attendance flows using location, NFC, and device authentication capabilities.
- Explored mobile app architecture and local/cloud data handling for a potential production-oriented workflow.

NCC Buddy - Mobile Application | *Flutter, Firebase Authentication, Firestore, FCM* **[Planning]**

- Outlined an Android/iOS app architecture with OTP sign-in, cloud-backed data storage, and Firebase Cloud Messaging notifications.

Smart Armoury Locker Node | *ESP32 / Raspberry Pi Pico W, RFID, fingerprint sensor, load cell* **[Hardware design]**

- Designed a connected locker concept combining RFID and fingerprint-based access with load-cell monitoring for physical-security signals.

Krishi Sahayak - Agriculture Support App | *Flutter, Dart* **[Scaffold]**

- Created the initial Flutter application scaffold and dependency configuration for an agriculture-support mobile app.

Hospital Management System | *Java, Swing/UI, MySQL* **[Academic project]**

- Built an academic desktop application with Java interface elements and MySQL connectivity for hospital-management workflows.
- Applied object-oriented programming and SQL concepts for structured storage and retrieval.

Food Ordering System | *Java Swing, MySQL* **[Academic project]**

- Built a GUI-based academic application connecting food-ordering workflows to relational database storage.

DEVELOPMENT AND DEPLOYMENT PRACTICE

- Worked with deployment workflows involving Vercel, Render, Supabase, Neon, and Railway for frontend, API, and database components.
- Troubleshot development issues involving TypeScript build checks, Leaflet server-side rendering, API environment configuration, database connection settings, and Prisma/database migrations.
- Used Git and GitHub for repository setup, source control, and project documentation workflows.

LEADERSHIP AND COORDINATION

Leader - Arya E-Sports Club: Coordinate student activities, tournament planning, event logistics, registrations, venue and internet requirements, and team communication.

- Developed practical coordination skills through organizing student activities and communicating requirements across participants and supporting teams.

PROFESSIONAL STRENGTHS

Strengths: Problem-solving, team collaboration, event coordination, structured documentation, and willingness to learn.
